Brand Guidelines

How to use the Aniyé Africa identity — the marks, the colours, the type, and the rules that keep it consistent everywhere.

Aniyé Africa

Gifts that arrive. · hello@aniyeafrica.com

Named for our children, built for yours.

Aniyé Africa is a pan-African gifting marketplace — cakes, flowers, spa days, perfume and restaurant treats, delivered across the continent within 24 hours.

The brand exists to close distance. For everyone who lives away from the people they love, Aniyé turns affection into something that actually arrives: chosen, wrapped, and delivered to a doorstep, fast.

The identity is built to feel like the gift itself — warm, considered and quietly premium. That is why the system is disciplined: one elegant serif, a deep ink foundation, and gold used sparingly, only ever on the é that carries the brand's name.

Voice

Warm, generous and unhurried. We speak plainly and personally — never corporate, never loud. The gold is a whisper, not a shout.

"Send love home, across any border."

Four marks, one identity.

The Aniyé identity has four official lockups. Each has a job. Choose the one that fits the space and context — never redraw, retype or recombine them.

The primary logo lockup consists of the word "Aniyé" in a serif font, with the "é" in a gold color. Below it, the word "AFRICA" is written in a smaller, all-caps, sans-serif font, centered.

1 • Primary (stacked)

The default mark — "Aniyé" with "AFRICA" centred beneath. Use it almost everywhere: profiles, packaging, headers, documents.

The horizontal logo lockup features the word "Aniyé" in a serif font, with the "é" in gold, followed by the word "Africa" in a smaller, all-caps, sans-serif font, centered.

2 • Horizontal

The secondary lockup. Use only in wide, short spaces where the stacked mark would sit too small — site headers, email signatures, banners.

The monogram logo lockup is a gold-colored "é" centered on a solid black rectangular background.

3 • Monogram (the é)

The shorthand. Use only where the full name already appears nearby, or as a decorative accent.

4 • App icon / Avatar

Profile pictures, app tiles, favicons. The é on a solid brand field.

Pick by background.

Every lockup ships in full-colour, reversed, and single-colour versions. The rule is contrast and legibility — choose the version that keeps the wordmark crisp against its background.

Full colour — on light

Ink type + gold é. Use on Paper, Warm Cream or white. This is the preferred version.

Reversed — on dark

Paper type + glow gold é. Use on Ink or dark photography.

Single colour — ink

When gold can't reproduce (faxes, engraving, single-colour print, embossing).

Single colour — reversed white

On gold, on photography, or on any saturated colour where a one-colour mark reads best.

é A single-colour **gold** version also exists for special finishes (foil, embossing). Use it only on Ink or Paper, never on a mid-tone.

Give it room.

Clear space

Keep a margin of clear space around the logo equal to the height of the **é** on all sides. Nothing — text, images, edges or other logos — should enter this zone.

Minimum size

To keep the **é** legible, never reproduce the primary (stacked) logo smaller than **22 mm** wide in print, or **96 px** wide on screen. Below that, switch to the monogram or app-icon mark.

File formats — and when to use them

SVG

Vector. Infinitely scalable. Use for web, and hand this to any designer or printer. Always preferred when supported.

PNG

Raster with transparency. Use in slides, documents, social and email where SVG isn't accepted.

Favicon

16–512px app-icon PNGs for browser tabs, app tiles and bookmarks.

What not to do.

The mark's strength is its restraint. These rules protect it.

- ✓ Keep the é gold and everything else ink or paper.
- ✓ Use the supplied files at their true proportions.
- ✓ Choose the version with the most contrast on its background.
- ✓ Give the logo its full clear space.
- ✗ Don't recolour the é anything but gold, or colour other letters gold.
- ✗ Don't stretch, squash, rotate or add effects (shadows, outlines, gradients).
- ✗ Don't retype the name in another font — always use the supplied artwork.
- ✗ Don't place the logo on a busy or low-contrast background.
- ✗ Don't use pure black — the brand's dark is Ink (#2B2622).

Ink and gold.

Ink dominates. Gold is the single accent — reserved, never spread across large areas. Warm neutrals carry everything else.

Ink

#2B2622 · The dark base.
Type, never pure black.

Gold

#C9A24B · The accent. The é,
CTAs, dividers.

Glow Gold

#D9B25E · Gold on dark
backgrounds.

Warm Cream

#F3EFE6 · Hero & section
backgrounds.

Paper

#FBFAF7 · Nav, footers, clean
fields.

Hairline

#ECE6DA · Borders & fine
rules.

Soft Gold

#8A7A52 · Straplines, muted
gold text.

Body

#6B6358 · Body copy.

Muted

#9A9082 · Captions,
secondary text.

Proportion guide: roughly 70% neutrals (ink, paper, cream), 25% supporting tones, and no more than 5% gold. If a layout looks "gold," pull it back.

Fraunces & Inter.

Aa

Fraunces — Headings

A warm, high-contrast serif. Used for headlines, the wordmark and any expressive moment. Weights: Regular & SemiBold. Set tight, with generous size contrast against body copy.

Send love home,
across any **border**.

Aa

Inter — Body & UI

A clean, neutral sans for body text, buttons, labels and interface. It stays out of the way so Fraunces and the gold é can lead. Use Regular for copy, SemiBold for emphasis and labels.

ABCDEFGHIJKLM
abcdefghijklm 0123456789

Hierarchy

Element	Font	Treatment
Display / H1	Fraunces SemiBold	Large, tight, ink. Gold reserved for one key word.
Subhead / H2–H3	Fraunces SemiBold	Smaller, ink.
Body	Inter Regular	Body colour (#6B6358), generous line height.
Label / Eyebrow	Inter SemiBold	Uppercase, tracked, gold or soft gold.

Gifts that arrive.
